PROFILE

Software Engineering student at Addis Ababa Science and Technology University with project experience in backend engineering, API development, and workflow-based systems. Built applications in payments, recruitment, and coordination using Go, PostgreSQL, RabbitMQ, Next.js, Flutter, and Firebase. Seeking a backend internship to grow through real-world engineering work while contributing to production-quality software.

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript, Dart, Java, Python

Backend: REST APIs, PostgreSQL, GORM, Chi, Gin, RabbitMQ

Frontend: React, Next.js, TypeScript, Tailwind CSS

Mobile: Flutter, Firebase Auth, Firestore, Cloud Functions, FCM

Tools: Docker, Git, Supabase, Render, Vercel, S3-compatible storage

Focus: Authentication, background jobs, database modeling, workflow design

EDUCATION

BSc in Software Engineering

Addis Ababa Science and Technology University

Expected Graduation: 2027

SELECTED PROJECTS

Maid Recruitment Platform

Go (Chi, GORM) • PostgreSQL • Next.js • TypeScript
[Live demo](#) | [GitHub](#)

- Built and deployed a full-stack recruitment platform supporting workflows between Ethiopian and foreign agencies.
- Implemented authentication, partner workspaces, candidate sharing and selection flows, file uploads, and admin functionality.
- Added scheduled expiry logic and status tracking, with backend structure focused on maintainability and data integrity.

Distributed Payment Processing System

Go (Gin) • PostgreSQL • RabbitMQ • Docker
[GitHub](#)

- Built a payment workflow system with idempotency handling, transactional outbox, and event-driven processing.
- Implemented retries, payment state transitions, and audit-oriented record handling for safer failure recovery.
- Used Docker for repeatable local setup and testing.

Diaspora Delivery Matching Platform (P2P)

Flutter • Firebase Auth • Firestore • Cloud Functions • FCM
[GitHub](#)

- Built a mobile coordination platform with trip and request matching, chat, notifications, and media uploads.
- Integrated Firebase services for authentication, real-time data handling, and backend logic through Cloud Functions.
- Structured the app using BLoC/Cubit and repository pattern for maintainability.
